6. The following are factors to be considered to show the inadvisability of moving the document exploitation effort now being conducted using documents seized in the Pacific Theater of Operations.

a. From a long-range viewpoint and in regard to the value of the collection of Japanese documents now being processed at WDC, it can be stated that this collection is the most complete source of information on the entire Far East in the world today and containing information of equal value to the War, State and Navy Departments. This material includes such collections as the South Manchurian Railway Library, the East Asia Research Institute Library and the Japanese Ministries' Files. The South Manchurian Railway and the East Asia Research Institute were intelligence agencies which furnished Imperial Japanese GHQ and other Imperial agencies with economic, political, sociological, topographic and who's who intelligence on strategic areas in the Far East.

b. The ownership of the Japanese collection is shared jointly by the Army and Navy. Furthermore, [redacted] have participated in the collecting and processing of these documents and while the ownership remains with the United States they are authorized access to the document collection.

25X1

c. We are also committed to the theater in two ways. The release of such libraries as the South Manchurian Railway's and the East Asia Research Institute's for shipment to the United States was authorized by the Theater Commander only when it was guaranteed that the collections remain intact. Secondly, any movement of the document exploitation effort would delay the production of topographical studies, referred to above, that are desired by the theater as soon as possible.

d. The army component of WDC, i.e. PACMIRS, was moved to Washington so that an integrated organization of all linguists and necessary ancillary personnel of the Army, Navy, [redacted] could be affected thereby insuring the most efficient method of handling the document exploitation activity. This was necessary at the time because the Navy would not concur moving the ONI translation agency from Washington and it is doubtful whether the Navy would concur in moving its component of this integrated activity at this time.

25X1

e. Over half of the 500 tons of documents seized have been processed to date. At the present time the only documents being processed are those pertaining to the USSR Far East and Satellite territories. It is anticipated that as of 1 October 1946 all documents pertaining to the USSR Far East and the Satellites will have been processed and that after that date the greatest effort can be placed on the exploitation of the documents dealing with these areas with only a small portion of our linguist and non-linguist strength being spent on the processing of material on other areas on a long range basis.

f. A move at this time would involve moving 1600 mail sacks of unprocessed material, the library containing about half of the collection which has already been processed, publication facilities, and document research personnel. It would mean a delay in the accomplishment of the mission of WDC of at least four weeks, a delay which would seriously affect completing the processing of all documents by 1 July 1947 and the concurrent exploitation of documents on strategic areas. The 1 July 1947 deadline was established based on the fact that the Intelligence Division was authorized by higher authority an allotment of forty officers and ninety-nine civilians until 1 July 1947, for exploitation of Japanese documents.
